

CORNCON 9 – CISO SUMMIT

10/5/2023 - 9:15 AM - CISO Summit

Rob Labbe, CEO/CISO-in-Residence, MM-ISAC

<https://www.linkedin.com/in/rob-labbe/>

Don't ever forget what we do here

10/5/2023 - 10:15 AM - CISO Summit

Ian Davila, Lead Adversary Emulation Engineer, Tidal Cyber

Using ATT&CK for threat profiling; defensive stacks; and coverage maps

10/5/2023 - 9:15 AM - CISO Summit

CISO Panel – Today and Tomorrow; Threats & Trends

- Stel Valavanis, CEO, OnShore Security (moderator)
- Paul Groisman, Sr. Director/Cybersecurity, FuboTV
- Javier Gonzalez, CEO & Managing Partner, Verily-IT
- Randy Raw, CISO, Vetrans United Home Loans

10/5/2023 - 12:30 PM - CISO Summit

Cole Moss, Seemplicity

<https://www.linkedin.com/in/cole Moss/>

Group Discussion / Remediation Operations: Challenges & Best Practices

Seemplicity will facilitate a conversation on Risk Remediation Operations Challenges and Best Practices. We'll share some recent survey results on the benefits of effective workspace communications in IT/InfoSec; and the impact on productivity in general; and especially in the realm of DevSecOps and risk remediation. Attendees will then discuss with their peers – either in small table groups; or one large conversation (audience-size permitting) – so we can all learn from each other about what's working to make remediation operations efficient and effective.

10/5/2023 – 12:00 PM – CISO Summit

LUNCH BREAK Sponsored by:  **NorthStar**

10/5/2023 - 12:30 PM - CISO Summit

<https://www.linkedin.com/in/jeffreyeman/>

What Are We Doing Here? [Rethinking Security]

Ever notice that much of the discussion about cybersecurity seems to be focused on keeping ahead of vulnerabilities? How about patch management? Familiar with the elements of the risk equation? How does risk; risk management, or cyber resiliency help you determine your cybersecurity posture? I have been wondering for a while how to suggest to our industry that there is perhaps TOO much focus on vulnerabilities and not enough attention or focus on the other elements that derive the standard risk equation. What else should we focus on in terms of security when the vulnerabilities still remain?

10/5/2023 - 3:45 PM - CISO Summit

Randy Raw, CISO, Veterans United Home Loans

Identifying and Training Cybersecurity Leaders

10/5/2023 – 4:30 PM - CISO Summit Closing

CISO Summit attendees will be invited to the CISO Dinner at Armored Gardens, 315 Pershing Ave., Davenport, IA – Wristbands will be issued at the CISO Summit

The CISO Dinner Sponsors:

AI: Friend Or Foe?

There's so much excitement about large language models (LLM) and generative AI, or dare we say, "hype"? Nearly every day, we see another opinion, informed and not, on whether AI super intelligence is just around the corner and whether or not super intelligent AI will consent to share the earth with us mere humans. Should we security folk be concerned? And if so, what, if anything, might we do? Against a backdrop of hype and noise, are there more immediate concerns for security folks? Can genAI help us? What should we be afraid of? Join author Brook S.E. Schoenfield for a quick tour of the hype cycle and some real-world grounding on LLMs and genAI for and against security.

From Threats to Risk: How the Anatomy of Cyber Response Reveals Risk

Today's rapid pace of innovation has quickly become synonymous with the concept of digital disruption. Technology impacts every area of our businesses, and with it, so does cyber. Now with a new wave of AI leading the disruptive charge, how do we as risk executives see the forest through the trees when trying to assess the opportunities and risks associated with the new onslaught of AI help and hype. How do we create order around the noise? Come on a journey of current AI trends and learn about how to apply emerging risk methodology to your new AI norm.

How AI can shape Cyber Response; Cyber Resilience; and Recovery

The rapid evolution of technology has led us to a point where organizations are continuously exposed to the risks of cyber threats; ranging from sophisticated attacks to unforeseen vulnerabilities. My presentation will explain how Artificial Intelligence (AI) has emerged as a critical tool for enhancing cyber response; resilience; and recovery strategies. We will explore the application of AI in the realm of cybersecurity; focusing on its role in bolstering an organization's ability to effectively respond to incidents; maintain resilience in the face of adversities; and ensure swift recovery from cyber incidents.

10/6/2023 - 3:00 PM - Track 1

- Aaron Lint, Head of Cybersecurity, Anchorage Digital Bank
- Bob Duplessis, CISO, Old Second Bank
- Kate Kuehn, CTrO, Aon - Moderator
- Shawn Anderson, CTO, Boston Meridian Partners
- Solomon Smith, SVP/CISO, Momentum Financial Services

Financial Industry Panel: The emerging roll of risk in Financial Services

- How do you align the ever-changing landscape of Finance compliance requirements vs base level needs of actual security controls?
- How does the role of trust permeate within your financial organizations and how does reputational risk impact your cyber decision making?

- Do you think Security controls in finance vs “other” organizations are the same or how are they different?
- How is AI impacting your risk decision making?
- What are your thoughts on the implementation of financial transfer risk measures like cyber insurance into the overall resilience journey of a client?
- Many financial services companies are finding their CISO roles evolving into multiple risk roles rolling up under a risk executive? What are your thoughts on this trend?

The Art & Science of Metawar – How to Co-Exist With AI-Driven Reality Distortion, Disinformation, & Addiction^[1] in the Metaverse

"The Metaverse is the Most Powerful, Addictive, Reality Distortion Machine Ever Conceived... and it Can Predict the Future.

The metaverse is misunderstood. It's not Ready Player One or Snow Crash - at least not today and despite what Big Tech promises. That's a long way off.

The metaverse is simply an evolving storytelling environment in which humans have congregated for millennia to experience alternate, immersive, and simulated realities, with or without technology. Storytelling is designed to influence mental and physical perceptions suiting the purposes of the content creators.

Metawar is the art of applying science to create and defend against the influence of alternate realities in any version of the metaverse. What if we can longer rely on our senses to determine what is real and what is fiction?

My research into Metawar initially focused on metaversal technologies. Unexpectedly, it morphed into an intensely personal experience, triggering my own Metanoia, which had a profound impact on the entire Metawar Thesis."

Using AI to Improve Your Life- Techniques & Security Concerns

"Artificial intelligence (AI) is rapidly changing our world, and it has the potential to improve our lives in many ways. AI can be used to automate tasks, make predictions, and generate creative content. It can also be used to improve healthcare, education, and transportation, just to name a few.

Join me as I share some techniques and examples of how to get the most out of AI to improve your lives.

There are also cybersecurity concerns about the use of AI. AI systems can be vulnerable to cyberattacks, as they can be tricked into making incorrect decisions or generating harmful content. AI systems can also be used to create deepfakes, which are videos or audio recordings that have been manipulated to make it appear as if someone is saying or doing something they did not actually say or do.

Lastly, we will have ample time for you to share how you are currently using AI. We want to hear from you about how you use AI in your daily routine and how it has changed your life. Share your insights and learn from others in this engaging discussion. Don't miss this opportunity to be a part of the conversation about the future of AI and its impact on our society."

How AI Usage Risk Stacks Up: Psycho-Cyber Culture Decodes the Risky Business of AI Adoption

In the dynamic world of technology, AI's promise of innovation is both exciting and daunting. "How AI Usage Risk Stacks Up: Psycho-Cyber Culture Decodes the Risky Business of AI Adoption" delves into the heart of human-driven risks tied to AI adoption, blending cyber culture analysis with psychology. Drawing from historical trends, our proprietary model, and case studies that explore novel and engaging interventions, this talk aims to empower attendees with strategies and practical steps to enhance cyber awareness messaging and refine their human risk reduction programs, forging a safe and effective bridge between humanity and the advancing AI frontier.

CISO vs. vCISO: the train has left the station!

In the ever-evolving landscape of cybersecurity, businesses are faced with the critical decision of how to best secure their assets and data. Traditionally, companies have turned to Chief Information Security Officers (CISOs) to lead this charge. However, as business models and cyber threats have grown in complexity, many are now exploring the benefits of a virtual CISO (vCISO). This presentation delves into why businesses,

especially small to mid-sized enterprises, are increasingly leaning towards hiring a vCISO over a full-time CISO along my personal experiences as both CISO and vCISO. Key points include the cost-effective nature of vCISOs, their ability to offer a broad range of expertise derived from diverse industries, and the flexibility they bring in aligning with a company's specific needs. As organizations prioritize nimble, adaptive cybersecurity strategies, it's clear that the vCISO model is not just a trend, but a reflection of a larger shift in the cybersecurity world.
